J-Pixer: rapid traveller change for high productivity

The ability to exchange ring travellers quickly ensures short standstill times for ring spinning machines – a real productivity bonus for your spinning operations. The robust J-Pixer with its extremely durable mechanical components is made from particularly wear-resistant materials and is optimised for use in spinning processes and longevity.

Simple handling and easy servicing were the key areas of focus in the development and design of the J-Pixer ring traveller insertion device. All J-Pixer wearing parts are available as spares= and are easily replaced. The R+F J-Pixer reduces spinning personnel requirements and increases your productivity thanks to faster ring traveller changeover.

360° R+F Performance

Please see the range of the magazined travellers in our current pocket book.

Contact your R+F representative for further information and technical specifications or any R+F innovations.
